

Air conditioning

-  POWER GENERATION
-  COMPRESSED AIR GENERATION
-  AIR CONDITIONING TECHNOLOGY
-  TRANSMISSION SYSTEMS
-  HYDRAULIC SYSTEMS

## Engine mounted air conditioning

A frequent requirement from a customer with a special vehicle is higher performance or additional a/c systems because the standard systems are often just designed for the driver's cab and work stations in the vehicle „loading area“ have not been considered. In addition to the standard requirements such as temperature controlled medicine logistics, fresh or frozen goods transportation, a large part of our customers need air conditioned operator rooms in the fields of measurement technology, military and authorities with security tasks. Special solutions for tropical climates round off our portfolio perfectly.

We have been working together with all leading manufacturers of air conditioning systems for many years, supporting them with our competence. Vehicle manufacturers also turn to us if their end customer solutions are insufficient, or if special operating conditions require an air conditioning system with increased performance.

Especially our space and weight saving underfloor systems free up areas in today's special vehicles which have to convince and more through multifunctionality. Our systems ensure increased space and comfort. An air conditioned operator room is already standard these days.

## Your advantages

- Predominantly high-strength aircraft aluminium
- Over 500 self-developed kits
- Production on own turning and milling centres
- PK belt drives with more automatic jig
- We also deliver complete self-assembly kits

## Suitable vehicle types

Virtually all commercial vehicles, regardless of tonnage, transmission and drive concept.

Ask us, we will find the best solution for you!

## Areas of performance

All current refrigerant compressors such as. Seltec, Sanden etc.

Also double and triple compressor systems possible!

## Application areas

- + Air conditioned operator rooms
- + Temperature controlled medicine transport
- + Fresh and frozen goods transport
- + Catering vehicles
- + Promotional vehicles
- + Film set makeup rooms
- + BOS and military applications
- + Transport of persons

Individual solutions for the special vehicle sector

With our underfloor systems for generation of electricity and compressed air, you increase your payload and recover loading area. We will happily provide you with further information!
